Web Elements

Web Elements

Introduction

- Anything that is present on the web page is a WebElement such as text box, button, etc.
- WebElement represents an HTML element.

Types of Web Element

- 1) Textbox
- 2) Button
- 3) Radio button
- 4) Checkbox
- 5) Dropdown
- 6) Link
- 7) Label

Web Elements Actions Class

Actions Class

- Actions are mainly triggered using two peripherals – Keyboard and Mouse.
- Actions like clicking a button, entering a keyword in the search bar are prime examples of how we use a mouse or keyboard.
- These interactions are automated by using the Actions class in Selenium.
- The Actions class contains a collection of actions that can be performed in a web application.
- Two broad categories are Keyboard and Mouse Actions.

Actions Class

1. Mouse Actions:

- **Click():** Performs click on the element
- **doubleClick():** Performs double click on the element
- **clickAndHold():** Performs long click on the mouse without releasing it
- **dragAndDrop():** Drags the element from one point and drops to another
- **moveToElement():** Shifts the mouse pointer to the center of the element
- **contextClick():** Performs right-click on the mouse

Actions Class

2. Keyboard Actions:

- **sendKeys():** Sends a series of keys to the element
- **keyUp():** Performs key release
- **keyDown():** Performs keypress without release

Action Class

- Action in Selenium is an interface that provides two methods – build() and perform().
- The commands of the Action Interface are implemented by the Action class.
- The build() method generates a composite action containing all the actions in the chain. These actions are ready to be performed.
- The build() method returns a composite action.
- In scenarios where the action chain contains only one action, you can avoid the build() method and directly call the perform() method.

How to implement the Actions Class?

How to implement the Actions Class?

Implementation Steps

- To implement the Actions class in Selenium automation script, follow the steps given below:

Step 1: First, we have to import the package

`org.openqa.selenium.interactions.Actions.`

Step 2: To use the methods provided by the Actions class, we need to create an object of this class and pass the WebDriver as an argument.

`// instantiate the WebDriver`

`WebDriver driver = new ChromeDriver();`

`// create an object of the Actions class`

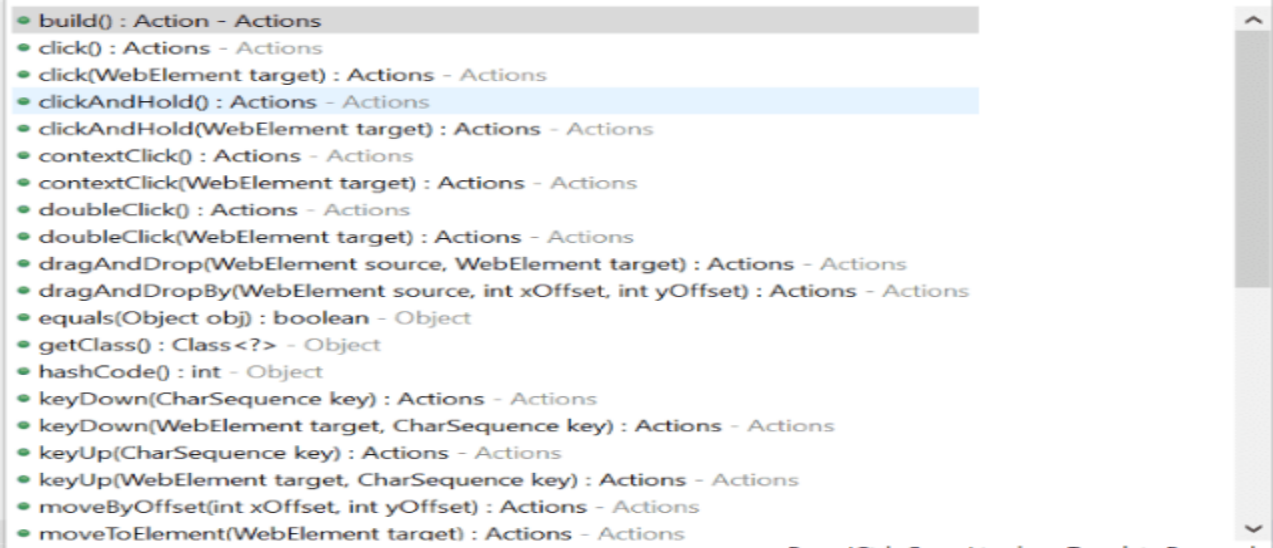

`Actions act = new Actions(driver);`

How to implement the Actions Class?

Implementation Steps

Step 3: The object created can now be used to perform any actions. You can see various actions that are provided by this class once you create an object.

```
1=import org.openqa.selenium.WebDriver;
2 import org.openqa.selenium.chrome.ChromeDriver;
3 import org.openqa.selenium.interactions.Actions;
4
5 public class Demo {
6     public static void main(String[] args) {
7
8         System.setProperty("webdriver.chrome.driver", "C:\\\\Users\\Shalini\\Downloads\\Driver\\chromedriver.exe");
9         WebDriver driver = new ChromeDriver();
10
11         Actions act = new Actions(driver);
12         act.
13
14     }
15 }
16
```

- build() : Action - Actions
- click() : Actions - Actions
- click(WebElement target) : Actions - Actions
- clickAndHold() : Actions - Actions
- clickAndHold(WebElement target) : Actions - Actions
- contextClick() : Actions - Actions
- contextClick(WebElement target) : Actions - Actions
- doubleClick() : Actions - Actions
- doubleClick(WebElement target) : Actions - Actions
- dragAndDrop(WebElement source, WebElement target) : Actions - Actions
- dragAndDropBy(WebElement source, int xOffset, int yOffset) : Actions - Actions
- equals(Object obj) : boolean - Object
- getClass() : Class<?> - Object
- hashCode() : int - Object
- keyDown(CharSequence key) : Actions - Actions
- keyDown(WebElement target, CharSequence key) : Actions - Actions
- keyUp(CharSequence key) : Actions - Actions
- keyUp(WebElement target, CharSequence key) : Actions - Actions
- moveByOffset(int xOffset, int yOffset) : Actions - Actions
- moveToElement(WebElement target) : Actions - Actions

How to Implement Actions class?

An Example Program using moveToElement(), click(), perform() and build() methods

```
public class WebElementActions {  
    public static void main(String[] args)  
    {  
        System.setProperty("webdriver.chrome.driver", "C:\\\\workspace\\\\ChromeDriver\\\\chromedriver.exe");  
        WebDriver driver = new ChromeDriver();  
        driver.manage().window().maximize();  
        driver.get("https://omayo.blogspot.com/");  
        WebElement blogsmenuElement = driver.findElement(By.id("blogsmenu"));  
        // actions object creation  
        Actions action = new Actions(driver);  
        action.moveToElement(blogsmenuElement).perform();  
  
        WebElement Option2 = driver.findElement(By.xpath("//span[text()='SeleniumByArun']"));  
        action.moveToElement(Option2).click().build().perform();  
  
        //action.click().perform();  
    }  
}
```

How to Implement Actions class?

An Example Program using contextClick()

```
public class WebElementActions {  
public static void main(String[] args)  
{  
    System.setProperty("webdriver.chrome.driver", "C:\\\\workspace\\\\ChromeDriver\\\\chromedriver.exe");  
    WebDriver driver = new ChromeDriver();  
    driver.manage().window().maximize();  
    driver.get("https://omayo.blogspot.com/");  
    WebElement blogsmenuElement = driver.findElement(By.id("blogsmenu"));  
    // actions object creation  
    Actions action = new Actions(driver);  
  
    WebElement searchfield = driver.findElement(By.xpath("//input[@name='q']"));  
    action.contextClick(searchfield).perform();  
  
    //action.click().perform();  
}  
}
```

How to Implement Actions class?

Output

How to Implement Actions class?

An Example Program using doubleClick()

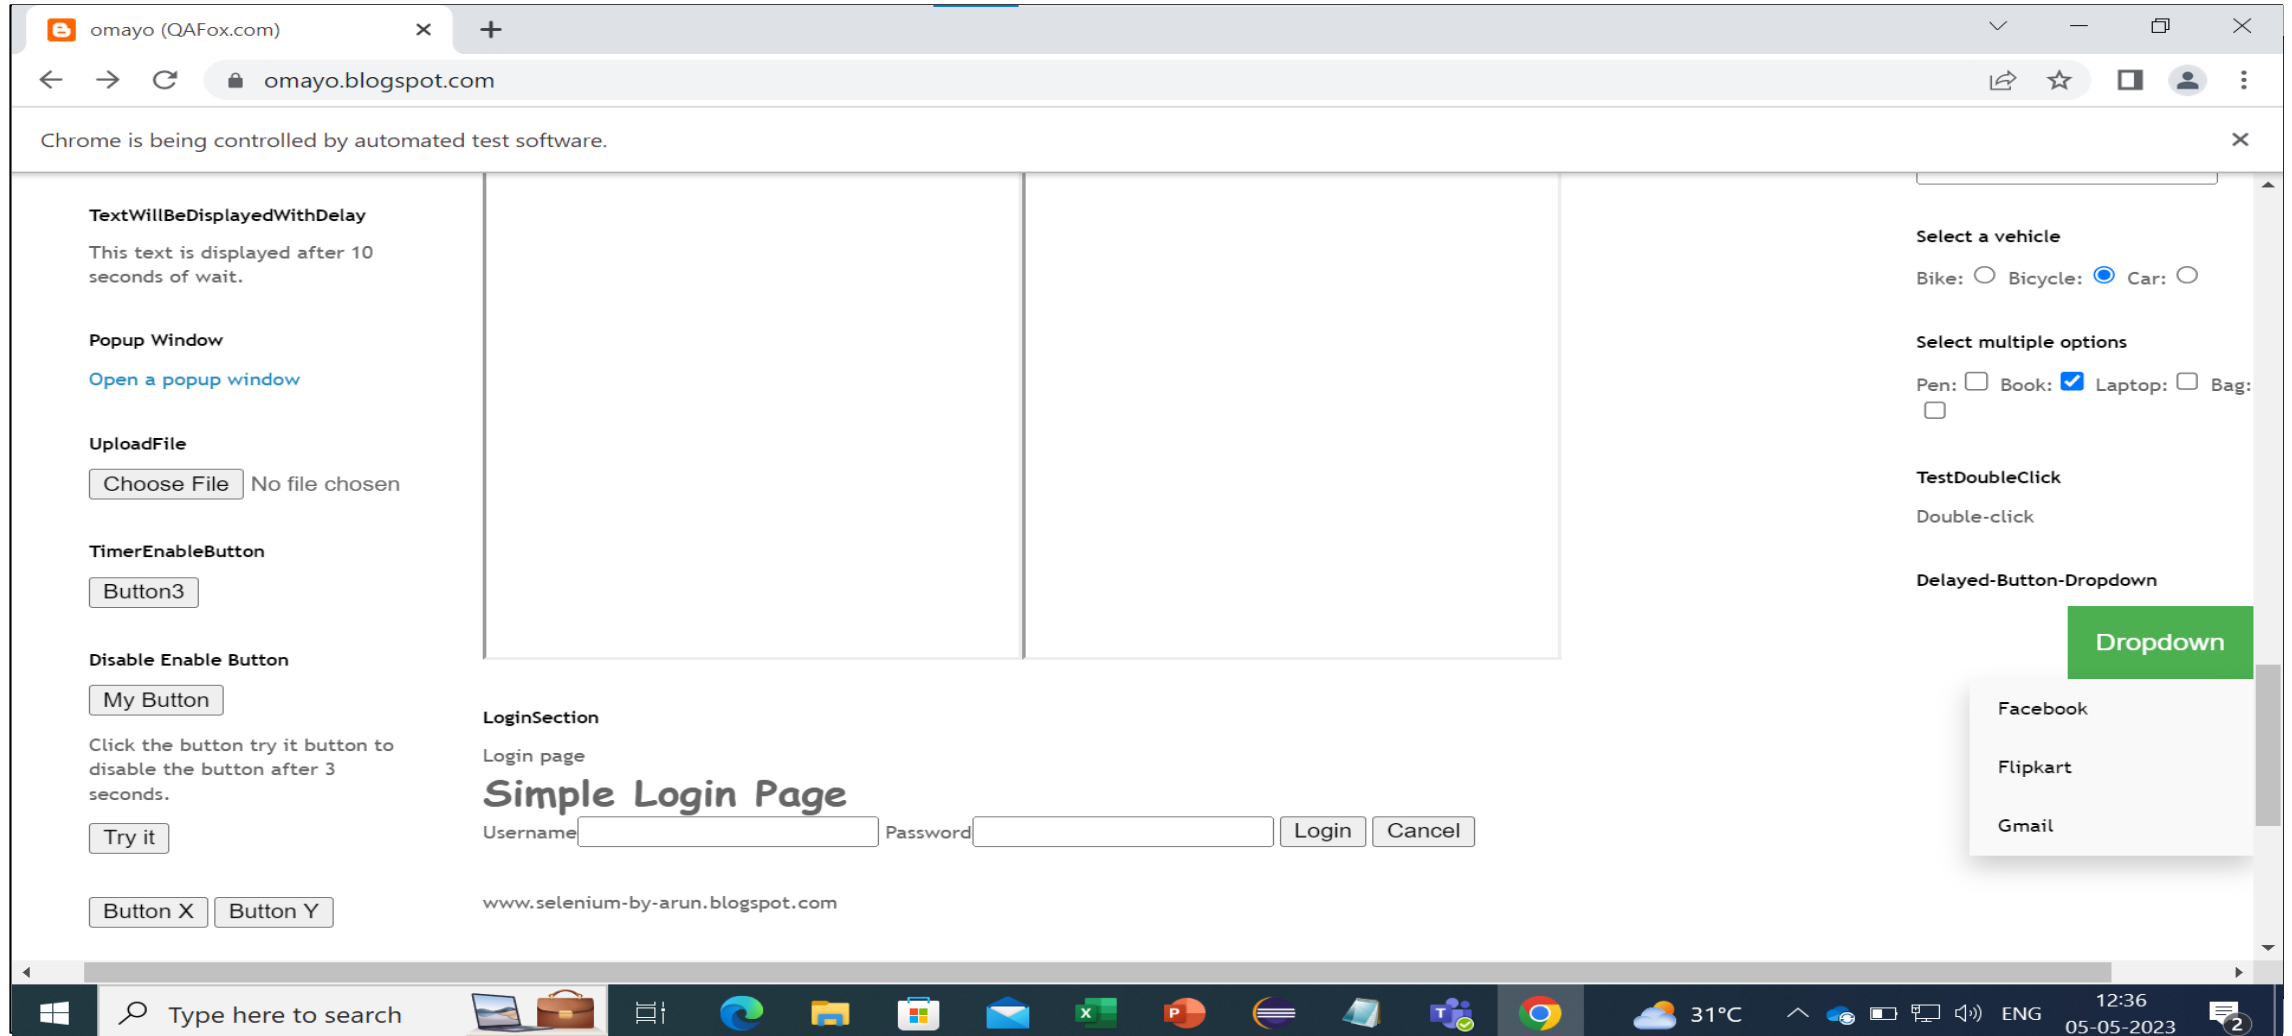

```
public class WebElementActions {
    public static void main(String[] args)
    {
        System.setProperty("webdriver.chrome.driver", "C:\\\\workspace\\\\ChromeDriver\\\\chromedriver.exe");
        WebDriver driver = new ChromeDriver();
        driver.manage().window().maximize();
        driver.get("https://omayo.blogspot.com/");
        WebElement blogsmenuElement = driver.findElement(By.id("blogsmenu"));
        // actions object creation
        Actions action = new Actions(driver);

        WebElement doubleclick = driver.findElement(By.id("testdoubleclick"));
        action.doubleClick(doubleclick).perform();

        //action.click().perform();
    }
}
```

Why do we need selenium waits?

Output

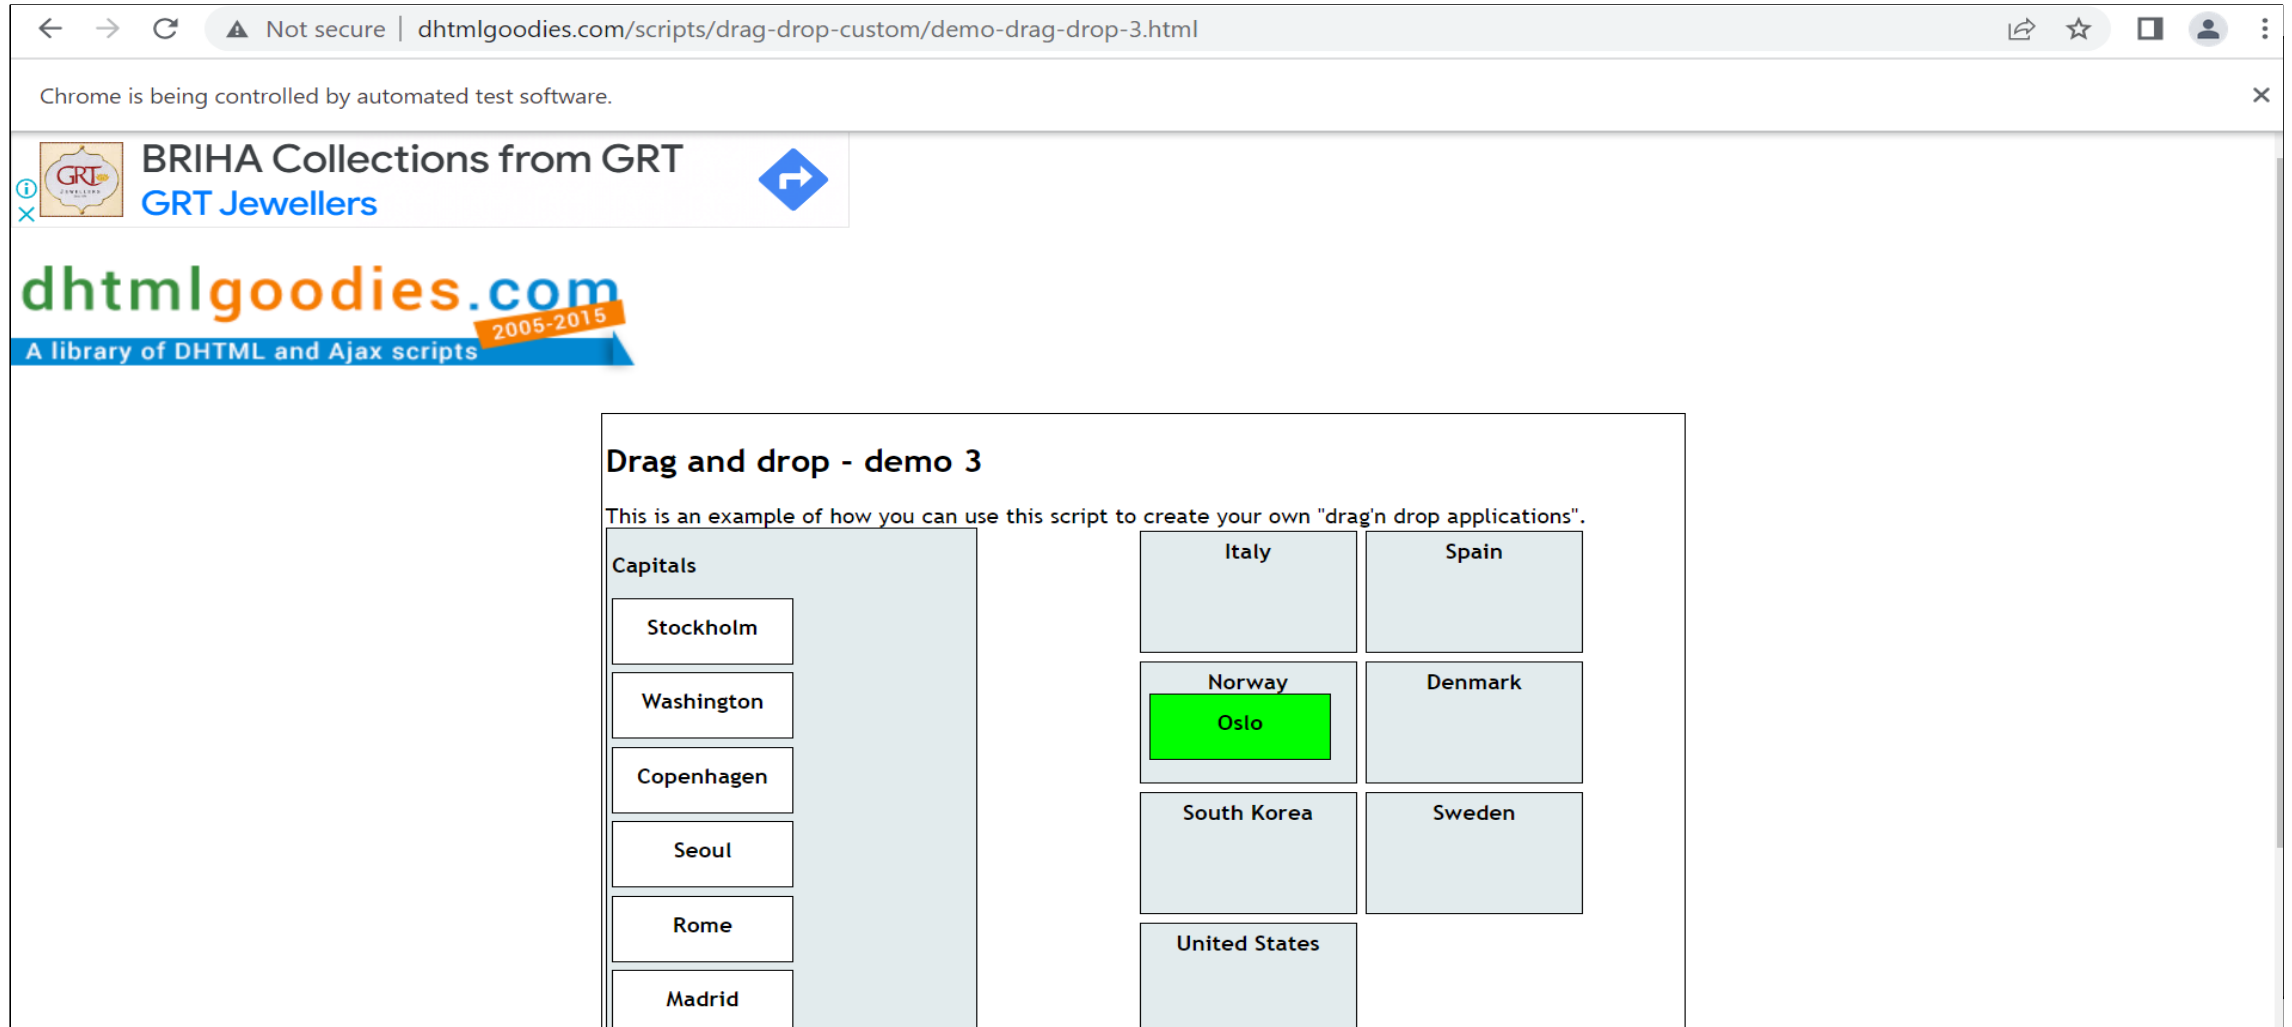

How to Implement Actions class?

An Example Program using clickAndHold(), release() and dragAndDrop()

```
public class WebElementActions {  
public static void main(String[] args)  
{  
    System.setProperty("webdriver.chrome.driver", "C:\\\\workspace\\\\ChromeDriver\\\\chromedriver.exe");  
    WebDriver driver = new ChromeDriver();  
    driver.manage().window().maximize();  
  
    Actions action = new Actions(driver);  
    driver.get("http://dhtmlgoodies.com/scripts/drag-drop-custom/demo-drag-drop-3.html");  
    WebElement box1 = driver.findElement(By.id("box1"));  
    WebElement box2 = driver.findElement(By.id("box101"));  
    action.clickAndHold(box1).moveToElement(box2).release().build().perform();  
  
    action  
  
}  
}
```

How to Implement Actions class?

An Example Program using `keyDown()`, `keyUp()` and `sendKeys()` methods

```
public class WebElementActions {  
    public static void main(String[] args)  
    {  
        System.setProperty("webdriver.chrome.driver", "C:\\\\workspace\\\\ChromeDriver\\\\chromedriver.exe");  
        WebDriver driver = new ChromeDriver();  
        driver.manage().window().maximize();  
        driver.get("https://omayo.blogspot.com/");  
        String parentWindowhandle=driver.getWindowHandle();  
        System.out.println("Main Window is" + parentWindowhandle);  
  
        WebElement compendiumDevlink = driver.findElement(By.id("blogsmenu"));  
  
        // actions object creation  
        Actions action = new Actions(driver);  
  
        WebElement compendiumDevlink = driver.findElement(By.linkText("compendiumdev"));  
        action.keyDown(Keys.CONTROL).moveToElement(compendiumDevlink).click().keyUp(Keys.CONTROL).build().perform();  
    }  
}
```

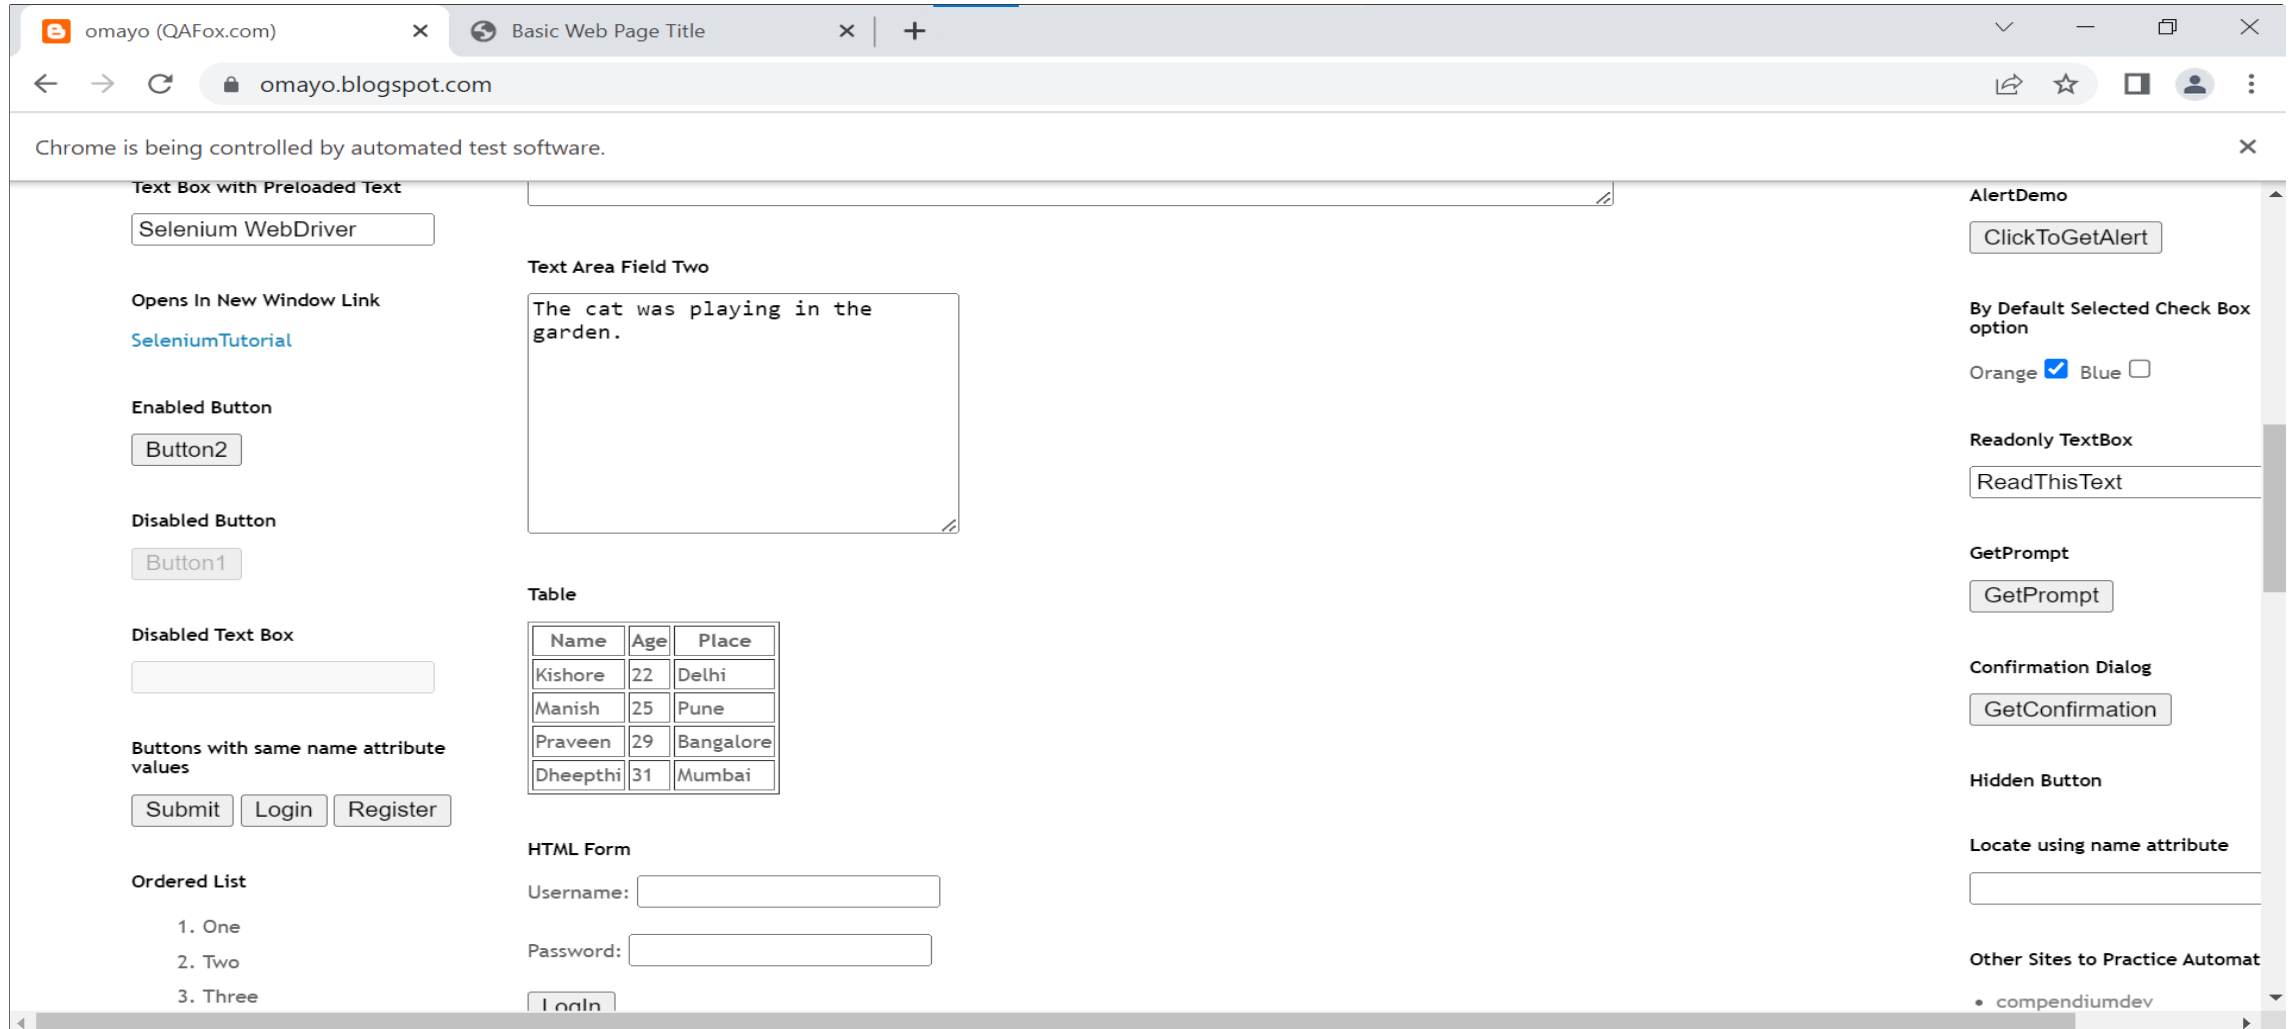

How to Implement Actions class?

An Example Program using `keyDown()`, `keyUp()` and `sendKeys()` methods

```
Set <String> windowhandles = driver.getWindowHandles();  
for(String handles : windowhandles)  
{  
    driver.switchTo().window(handles);  
}  
Thread.sleep(3000);  
System.out.println("Child Window is" + windowhandles);  
driver.switchTo().window(parentWindowhandle);  
}  
}
```

Why do we need selenium waits?

Output

Types of waits in Selenium

Program 1

```
public class Opengoole {  
  
    public static void main(String[] args) {  
        // TODO Auto-generated method stub  
        System.setProperty("webdriver.chrome.driver", "E:\\Testing\\chromedriver.exe");  
        WebDriver driver=new ChromeDriver();  
        driver.manage().timeouts().implicitlyWait(20, TimeUnit.SECONDS);  
        driver.get("http://www.google.com");  
        WebElement searchBox=driver.findElement(By.name("q"));  
        searchBox.sendKeys("Java Programming"+Keys.ENTER);  
    }  
}
```
